

4.4.2 LANGWITH GARDENS, HOLBEACH

The Lincolnshire County Council are putting forward a drainage improvement scheme for grant aid in 2014/15 to alleviate the problems which occur in Langwith Gardens, Holbeach. During periods of heavy rainfall, water struggles to drain from this locality as was seen in 2007 and 2009. The plan below shows the proposed new drainage route, and the works also include the cleaning out of a private watercourse between the rear gardens of properties in Langwith Gardens, the condition of which local residents have complained about many times over the years. An approach has been made by the Lincolnshire County Council to ascertain if the Board are willing to contribute financially to the work. Any contributions to the scheme will increase the priority score and likelihood of receiving grant aid.

Site Plan

4.4.3 GRANVILLE TERRACE, SUTTON BRIDGE

The Lincolnshire County Council have approached the Board for assistance in investigating a drainage problem at Granville Terrace, Sutton Bridge. During heavy rainfall, Granville Terrace and the streets either side, Withington Street, and Crosby Row, flood as the highways water is unable to drain away through the private drainage system to the north. The private watercourse passes through Sutton Bridge Parish Council land and can drain to either the Board's Westmere Drain or the Board's Allenby's Chase pipeline. The Sutton Bridge Parish Council have agreed to pay for the Board to carry out a survey of the watercourse on a re-chargeable basis. From an initial viewing of the drain it would appear that the work required is beyond a regular maintenance job and will require an improvement scheme to be carried out. As the Sutton Bridge Parish Council have limited funds and are unlikely to be able to afford such an improvement, it is suggested that the Board and the Lincolnshire County Council look at undertaking this as a joint scheme and put it forward for grant in this
